One of the most ambitious texts to be published in dermatology for some years, this is a comprehensive guide to dermatologic conditions, classified by physical findings, and referenced to current literature. There are 284 entries, arranged alphabetically. The art and science of clinical dermatology rest with the ability of the clinician to formulate an appropriate differential diagnosis by defining and synthesizing the physical findings; this book serves as a guide in that quest, and will be both educational and stimulating to dermatologists at all levels of training and practice.
