Hangzhou Lectures on Eigenfunctions of the Laplacian (AM-188) (Annals of Mathematics Studies)
Christopher D. Sogge

Based on lectures given at Zhejiang University in Hangzhou, China, and Johns Hopkins University, this book introduces eigenfunctions on Riemannian manifolds. Christopher Sogge gives a proof of the sharp Weyl formula for the distribution of eigenvalues of Laplace-Beltrami operators, as well as an improved version of the Weyl formula, the Duistermaat-Guillemin theorem under natural assumptions on the geodesic flow. Sogge shows that there is quantum ergodicity of eigenfunctions if the geodesic flow is ergodic.

Sogge begins with a treatment of the Hadamard parametrix before proving the first main result, the sharp Weyl formula. He avoids the use of Tauberian estimates and instead relies on sup-norm estimates for eigenfunctions. The author also gives a rapid introduction to the stationary phase and the basics of the theory of pseudodifferential operators and microlocal analysis. These are used to prove the Duistermaat-Guillemin theorem. Turning to the related topic of quantum ergodicity, Sogge demonstrates that if the long-term geodesic flow is uniformly distributed, most eigenfunctions exhibit a similar behavior, in the sense that their mass becomes equidistributed as their frequencies go to infinity.

From reader reviews:

Candice Delgado:

This book untitled Hangzhou Lectures on Eigenfunctions of the Laplacian (AM-188) (Annals of Mathematics Studies) to be one of several books that will best seller in this year, that's because when you read this reserve you can get a lot of benefit into it. You will easily to buy this specific book in the book retailer or you can order it by way of online. The publisher with this book sells the e-book too. It makes you easier to read this book, since you can read this book in your Smart phone. So there is no reason for your requirements to past this guide from your list.

Janet Magnuson:

The guide with title Hangzhou Lectures on Eigenfunctions of the Laplacian (AM-188) (Annals of Mathematics Studies) includes a lot of information that you can learn it. You can get a lot of benefit after read this book. This particular book exist new understanding the information that exist in this guide represented the condition of the world currently. That is important to yo7u to be aware of how the improvement of the world. That book will bring you with new era of the the positive effect. You can read the e-book on the smart phone, so you can read it anywhere you want.

Diane Gibbons:

People live in this new moment of lifestyle always aim to and must have the spare time or they will get wide range of stress from both everyday life and work. So , whenever we ask do people have time, we will say absolutely without a doubt. People is human not only a robot. Then we consult again, what kind of activity are there when the spare time coming to a person of course your answer can unlimited right. Then ever try this one, reading textbooks. It can be your alternative throughout spending your spare time, the book you have read is Hangzhou Lectures on Eigenfunctions of the Laplacian (AM-188) (Annals of Mathematics Studies).

Christina Ochs:

In this time globalization it is important to someone to obtain information. The information will make professionals understand the condition of the world. The fitness of the world makes the information easier to share. You can find a lot of sources to get information example: internet, paper, book, and soon. You will see that now, a lot of publisher this print many kinds of book. The book that recommended to you personally is Hangzhou Lectures on Eigenfunctions of the Laplacian (AM-188) (Annals of Mathematics Studies) this publication consist a lot of the information with the condition of this world now. This book was represented how do the world has grown up. The terminology styles that writer use to explain it is easy to understand. Typically the writer made some investigation when he makes this book. That is why this book ideal all of you.
