## **Anesthesiology: Current Approaches to Regional Anesthesia (Audio-Digest Foundation Anesthesiology Continuing Medical Education (CME). Book 51) Audio Digest**

Purpose: Audio-Digest Foundation CME/CE activities are designed to provide its learners -- physicians and other healthcare professionals -- with continuing education that will help identify clinical problems in their practice settings, provide content to help to solve those problems, and increase their application of knowledge to practice.

Audio-Digest Anesthesiology is specifically designed to provide the participant with state-of-the-art information including, but not limited to:

- Hazards of working in the OR
- Hemostasis and hemotherapy
- Opioids vs. non-opioid anesthesia
- Inhalation anesthesia
- Muscle relaxants
- Local anesthetics
- Preoperative medication
- Airway management
- Monitoring the anesthetized patient
- Epidural and spinal anesthesia
- Peripheral nerve blockade
- Cancer therapy and its anesthetic implications
- The allergic response
- Anesthesia for nonoperative locations
- Postoperative recovery
- Management of acute and chronic pain

The goals of this program are to improve the use of continuous peripheral nerve catheter infusions and to identify benefits of regional anesthesia (RA) over general anesthesia (GA). After hearing and assimilating this program, the clinician will be better able to:

- 1: Discuss the efficiency of analgesia and rapid return of function associated with continuous peripheral nerve block infusions for major orthopedic procedures.
- 2: Explain the adjunctive use of multimodal non-narcotic analgesia with peripheral nerve catheter infusions for improving efficacy and pain relief in the postoperative period.
- 3: Apply continuous peripheral nerve infusions in the outpatient setting.
- 4: List issues for the surgeon, patient, and anesthesia provider to consider when choosing RA.

5: Appraise the benefits of RA over GA for particular surgical populations and specific procedures.
