Bulletin of the American Institute of Mining Engineers Volume 130-132 American Institute of Engineers
This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 Excerpt: ...very conservative manager of a large company, with whom I was acquainted, in looking over his maps discovered that there was room for another well between some good ones. He made a location about in the center of a plot having the form of an equilateral triangle with a good well at each apex about 450 ft. distant from the central location made. From the logs of the three good wells he considered that he had a sure shot for an oil well, so he put in a field tank, ran his oil line, and brought up a shackle rod all before the well was drilled in. It proved to be a dry hole, no oil sand being found, although the three adjacent producing wells had between 20 and 30 ft. of good paying sand. I could cite other similar instances of dry holes among good producers. The author indicates, in what I have quoted, that he would consider the log of the well described as improper and inaccurate and proposes to reject such from record because it would not check with the average of several adjacent wells. If the proposed bureau for collecting and filing well logs cut out such records as did not happen to suit the fancy of some bureaucrat, what sort of a muddle would the bureau soon get into? If an oil man in responsible charge of property did this it would properly be characterized as juggling the record. I must dissent very emphatically from any such summary rejection of well logs from records as the author proposes. I quite believe that such a bureau is impractical and that it would require special men in the field for the sole purpose of supervising the making of well logs if such data were to be collected with reasonable accuracy. I believe every well log to be of real value for public record should carry with it the elevation of the top of the well casing from some datum...
