Resistive, Capacitive, Inductive, and Magnetic Sensor Technologies (Series in Sensors)

Winncy Y. Du

Resistive, Capacitive, Inductive, and Magnetic Sensor Technologies (Series in Sensors) Winncy Y. Du

Sensor technologies have experienced dramatic growth in recent years, making a significant impact on national security, health care, environmental improvement, energy management, food safety, construction monitoring, manufacturing and process control, and more. However, education on sensor technologies has not kept pace with this rapid development ... until now.

Resistive, Capacitive, Inductive, and Magnetic Sensor Technologies examines existing, new, and novel sensor technologies and?through real-world examples, sample problems, and practical exercises?illustrates how the related science and engineering principles can be applied across multiple disciplines, offering greater insight into various sensors' operating mechanisms and practical functions. The book assists readers in understanding resistive, capacitive, inductive, and magnetic (RCIM) sensors, as well as sensors with similar design concepts, characteristics, and circuitry.

Resistive, Capacitive, Inductive, and Magnetic Sensor Technologies is a complete and comprehensive overview of RCIM sensing technologies. It takes a unique approach in describing a broad range of sensing technologies and their diverse applications by first reviewing the necessary physics, and then explaining the sensors' intrinsic mechanisms, distinctive designs, materials and manufacturing methods, associated noise types, signal conditioning circuitry, and practical applications. The text not only covers silicon and metallic sensors but also those made of modern and specialized materials such as ceramics, polymers, and organic substances. It provides cutting-edge information useful to students, researchers, scientists, and practicing professionals involved in the design and application of sensor-based products in fields such as biomedical engineering, mechatronics, robotics, aerospace, and beyond.

From reader reviews:

Doris Williams:

Book is actually written, printed, or created for everything. You can recognize everything you want by a guide. Book has a different type. To be sure that book is important factor to bring us around the world. Alongside that you can your reading skill was fluently. A guide Resistive, Capacitive, Inductive, and Magnetic Sensor Technologies (Series in Sensors) will make you to always be smarter. You can feel considerably more confidence if you can know about almost everything. But some of you think which open or reading a new book make you bored. It is far from make you fun. Why they might be thought like that? Have you in search of best book or ideal book with you?

John Jacquez:

The reserve with title Resistive, Capacitive, Inductive, and Magnetic Sensor Technologies (Series in Sensors) has a lot of information that you can find out it. You can get a lot of benefit after read this book. This particular book exist new know-how the information that exist in this guide represented the condition of the world currently. That is important to yo7u to be aware of how the improvement of the world. This book will bring you inside new era of the globalization. You can read the e-book in your smart phone, so you can read that anywhere you want.

John Silver:

People live in this new moment of lifestyle always aim to and must have the free time or they will get large amount of stress from both everyday life and work. So , whenever we ask do people have free time, we will say absolutely indeed. People is human not a robot. Then we question again, what kind of activity are you experiencing when the spare time coming to a person of course your answer will certainly unlimited right. Then ever try this one, reading ebooks. It can be your alternative inside spending your spare time, the actual book you have read is usually Resistive, Capacitive, Inductive, and Magnetic Sensor Technologies (Series in Sensors).

Kelly Edge:

What is your hobby? Have you heard this question when you got pupils? We believe that that issue was given by teacher on their students. Many kinds of hobby, All people has different hobby. And you also know that little person similar to reading or as looking at become their hobby. You have to know that reading is very important along with book as to be the thing. Book is important thing to increase you knowledge, except your own teacher or lecturer. You will find good news or update regarding something by book. Numerous books that can you go onto be your object. One of them is niagra Resistive, Capacitive, Inductive, and Magnetic Sensor Technologies (Series in Sensors).
